

**Summit Technology's PowerSight® Serial Communications Cable design is not considered a proprietary secret.** It is designed for RS232 and RS485 communications between a DB9 male and a mini-DIN-8 female connector. As such, it is intended to handle communications of standard speeds and standard distances. Our normal cable is 2 meters (6 feet) long. The cable need not have twisted pair nor shielding, though both are preferable.

The pin connectivity and connectors of the cable is as follows:

## RS232 cable for PowerSight
